PROFESSIONAL SUMMARY

Data engineer with six years of experience building and operating production ETL/ELT pipelines, financial data integrations, and reconciliation workflows at a $35B fixed-income asset manager. Owns business-critical pipelines that ingest custodian, broker, and accounting data, with daily jobs processing ~22,000 transaction records each; completed Snowflake's Data Engineering Professional Certificate in 2026.

WORK EXPERIENCE

Reams Asset Management | Indianapolis, IN
Software Engineer **December 2025 – Present**

- Own and support production data pipelines, integrations, and reporting workflows serving approximately 150 portfolios and 20 investment professionals, including monitoring, incident response, and escalation.
- **Accounting Platform Migration:** Lead the ETL workstream for the firm's move to a new accounting system, documenting legacy processes, producing source-to-target mappings and sample files, refactoring production interfaces, and building reusable SQL functions that map warehouse data to the target platform's standards.
- Design and optimize SQL Server and Python data solutions using reusable data models, stored procedures, table-valued functions, indexing, and execution-plan analysis, cutting key process runtimes from ~5 minutes to under 10 seconds.
- Deliver peer-reviewed changes through Git and Azure DevOps CI/CD across development, QA, and production, including unit and regression testing, UAT, and deployment validation.
- Lead weekly operations planning for a four-person development team, prioritizing the backlog, scoping ambiguous requests, reviewing designs, and mentoring peers.

Application Developer **August 2020 – December 2025**

- Built Python, Perl, and SQL ETL pipelines for ingestion, transformation, reconciliation, secure delivery, accounting-system imports, and reporting across daily custodian, broker, and fund data feeds, with individual download jobs processing ~22,000 records each.
- **Commingled Fund Processing:** Replaced a legacy Access workflow with Python, Perl, and SQL automation for daily NAV ingestion, fund pricing, subscription and redemption activity, accounting imports, and custodian-to-internal market-value reconciliation, improving the accuracy and auditability of daily fund processing.
- **Futures and Options Fee Automation:** Engineered an end-to-end workflow that ingests broker fee files, applies configurable fee and matching rules, stages and reconciles transactions in SQL, imports completed records into the accounting system, and generates trade tickets, eliminating manual fee entry.
- **Collateral and Margin Integration:** Built SFTP file-generation, ingestion, and secure-transfer workflows for collateral positions, agreements, interest, margin, and payment instructions, with SQL account and counterparty mappings, shifting staff from routine preparation to exception review.
- Automated manual processing across operations workflows, eliminating ~3 hours of daily manual work and fully automating multiple production processes.
- Developed cross-system integrations, data-quality controls, reusable portfolio calculations, and database-driven reporting that improved data accuracy and reduced operational risk.

PERSONAL PROJECTS

Treasury Yield Curve (BigQuery, dbt, Python, GitHub Actions): Scheduled ELT pipeline loading daily Treasury par-yield history (1990–present) from XML into BigQuery, with tested dbt curve and spread marts feeding an Angular dashboard.

Indianapolis Air Quality Dashboard (DuckDB, dbt, Python, GitHub Actions): Daily pipeline converting OpenAQ sensor readings to EPA AQI using pollutant-specific averaging windows, seeded breakpoint tables, and a reusable dbt macro.

Squad Planner (Snowflake, dbt, Python, SQL): ELT pipeline that parses an HTML export to JSON, loads it into Snowflake via PUT/COPY INTO, and models age, progression, and contract-compliance marts with dbt.

TECHNICAL SKILLS

Data Engineering & Warehousing: Microsoft SQL Server, Snowflake, BigQuery, DuckDB, GCP, dbt, ETL/ELT, data validation, reconciliation, source-to-target mapping, data modeling, schema design, staging-layer and historical data design, stored procedures, table-valued functions, indexing, execution-plan analysis, query optimization

Languages & Libraries: Python, SQL (T-SQL), pandas, Perl, TypeScript, shell scripting

Integration & File Processing: REST/SOAP API integration, SFTP, fixed-width and CSV processing, batch data interfaces, secure file delivery

Orchestration & DevOps: Control-M, GitHub Actions, cron, Python-based job orchestration, Git, Azure DevOps, CI/CD, Docker, Linux, GitHub Copilot, Claude Code

Testing & Reliability: Unit and regression testing, UAT, peer code review, logging, monitoring and alerting, root-cause analysis, retry and recovery logic

Reporting & Visualization: Power BI, Tableau, Angular, ECharts

EDUCATION & CERTIFICATIONS

University of Iowa **Expected May 2029**
Tippie School of Business
MBA / MSBA Dual Degree Program

- Certificates: Business Analytics (completed); Finance and AI/ML (in progress)

Indiana University **May 2020**
Luddy School of Informatics & Computing
B.S. in Informatics

Snowflake Data Engineering Professional Certificate | Snowflake **2026**
